Role   : OpenText Exstream Developer

Tools : OpenText Exstream Design Manager

Description:

Aviva insurance is an insurance provider for various customers across UK providing different insurance policy letters as per the customer needs. The team I worked is responsible for developing letters which will be sent to the customers having information about their policy details. Letters specific to different applications are developed using OpenText Exstream Design Manager tool.

Responsibilities:

- Received business requirements via Jira, analyzed them, and reviewed detailed specification documents for implementation.
- Involved in developing letters using OpenText Exstream Design Manager.
- Involved in creating variables and mapping them to data files.
- Involved in creating output queue and assigning to the application as per the business requirement.
- Involved in providing datafile properties to match the system and assign mapping datasets.
- Involved in creating new pages/messages to new documents to the new application, Also provided overflow pages which meet overall document needs.
- Worked on both simplex and duplex pages as per business needs.
- Involved in creating advanced tables/charts, outputs, business rules/functions, placeholders.
- Provided triggering logics as per requirements at document, page and content level.
- Involved in creating stylesets, stylesheets, templates (Page, Message) at Global level of the project.
- Involved in working on postprocessing steps and scripts.
- Involved in Scrum calls in updating the task completion status and clarifications in-case required.
- Have involved in unit testing of code and creating document for the same as reference.
- Responsible for deploying code through the mainframe environment as part of the application release process.
- Involved in batch monitoring on the mainframe and worked on both online and batch applications.
- Prepared implementation plans and submitted ServiceNow change requests for production deployment.
